**EYEWITNESS
ANIMATIONS**

I HEAR AND I FORGET
I SEE AND I REMEMBER ...
an ancient Chinese proverb

THE CHALLENGE

It is difficult, at best, and often nearly impossible to convey a clear, concise understanding of a complex, technical event to a jury. The challenge in today's courtroom is to effectively relate to the finder-of-fact an understanding of an event that perhaps took only a few moments to occur, yet can often require volumes of investigative and evidentiary data to accurately describe.

The difference between winning or losing your case often rests on your ability to captivate the jury's interest and hold their attention.

THE SOLUTION

Whether the forum is mediation or trial you can now have the mediator, judge, or jury vicariously experience the event through the compelling medium of 3D computer generated animation. Allow them to experience the effects of time, speed, and distance from any perspective and in real time.

Major advances in computer technology, combined with the unique proprietary reconstruction processes and techniques developed by Eyewitness Animations, now make this high-tech tool more affordable than ever.

Eyewitness Animations has been a true pioneer and leader in the field of courtroom animation and exhibits, serving clients in the legal and engineering communities worldwide since 1989.

- Proven admissibility record
- Court certified experts - State & Federal
- Secure 24/7 client access to work in progress through our website

VEHICULAR

You can now present to the jury a precise reconstruction of any accident based on your expert's findings and opinions, which can include the following:

- Multiple views: driver's, eyewitness, chase, overhead etc.
- Multiple scenarios or "What-ifs?" (How the accident might have been prevented).
- Atmospheric conditions: fog, rain, snow, etc.
- Scene visibility and lighting conditions.
- Properly sequenced traffic signal systems.

CRIME SCENE

With clarity and absolute precision, present a reconstruction of the crime scene showing dynamically the placement and movement of individuals and the paths of projectiles. Effectively confirm or refute witness testimony with the ability to accurately display an individual's field of vision.

AVIATION

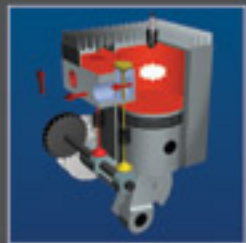

Eyewitness Animations' unique skill in aviation accident reconstruction is attributable to the vast practical experience and expertise of its staff in the areas of general and commercial aviation, aviation accident investigation, and aviation law. The President of the company holds an Airline Transport Pilot's license and is a former Captain of a major US airline with over 35 years of experience in commercial aviation. The staff also consists of an aerospace and mechanical engineer.

This intimate knowledge of the dynamics and laws of flight combined with our extensive experience in computer generated animation and graphics results in a final product able to withstand the most rigorous challenges in courtroom admissibility.

Our advanced capabilities allow us to incorporate and synchronize such elements as FAA radar data, flight data recorder information, cockpit voice recorder tapes, Air Traffic Control tapes, and US Weather Bureau radar overlays. This not only adds dramatic realism and impact to the presentation but also helps the jury put these individual pieces together and in proper perspective.

PRODUCT LIABILITY

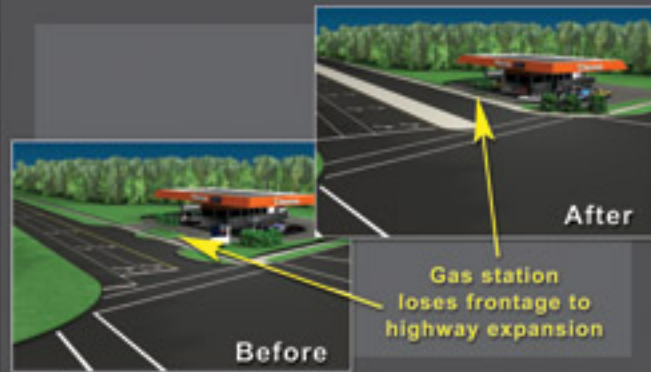

The power of the computer allows the jury to see through the transparent outer shell of a complex piece of equipment to view the operation and movement of those parts within. Through animation, demonstrate precisely the defect or fitness of design and construction of a piece of equipment or of an entire building.

EMINENT DOMAIN

Whether it be a highway expansion project or the effects of commercial development on a rural farm, there is absolutely no substitute for the effectiveness of 3D animation.

The ability to accurately depict the scene both before and after the actual or proposed changes are made will leave the finder of fact with an experience and opinion that no amount of argument or rhetoric can ever erase from his or her mind.

MEDICAL

Clarity of subject matter can be presented in an explicit yet dignified form.

A clear, simplified presentation of procedures and practices, without the gore and confusion of actual photos or videos which often tend to obscure the facts and distress the jury, can now be made.

SERVICES & PRODUCTS

- 3D & 2D Forensic Animations
- Exhibits, Posters, and Graphics
- Interactive DVD Presentations
- Forensic Audio Services
- Digital Photo Imaging

**CAPTURE AND HOLD THE JURY'S
ATTENTION WITH A COMPELLING
MULTI-MEDIA PRESENTATION**

You can now reduce all of your case materials to a single 4 ½ inch DVD disk that can be conveniently played back on a laptop computer. Imagine the flexibility of being able to change the order of your presentation *on the fly*. Not only will you have instant access to any document or exhibit, you will also be able to present them to the jury on presentation screens as large as 8 feet.

Inexpensive copies provide security against accidental document damage or loss. These copies also provide a convenient and economical method of providing copies of case materials to other parties.

**Incorporate these elements
on a single DVD:**

- Power Point presentations
- Animations
- Video segments
& depositions
- Photos
- Documents
- Charts,
Graphs,
Visual Aids &
Exhibits
