WIN MORE CASES!

Accident reconstruction, by its very nature, is extremely complex. When you must convey to a jury a clear and concise understanding of complex issues that deal with time, speed, distance and visibility, there is but one solution ...

3D Computer Graphics and Animation.

This is the first in a series of post cards illustrating EA's animated solutions to complex cases. In this case the challenge was to convey to the jury a true sense of what it was like for the occupants of the light colored vehicle to experience the terror of a head-on collision with a vehicle traveling in the wrong direction on a busy Interstate highway.

Through our animations, based totally on your data, we can take the jury to the actual scene and allow them to experience the event as if they were actually there. Through the use of various perspectives and "What-If" scenarios you can now SHOW the jury not only how the accident occurred but also how it could have been avoided.
